

CONSERVER[®] GREEN OIL SYSTEM

A GREEN OIL SYSTEM THAT KEEPS YOU MOVING

Are you tired of paying for oil changes? Do you want to lower your maintenance costs and your environmental impact? Next Generation Filtration has developed a new, green technology that reduces the need for oil changes. That means your trucks stay on their route, not in the shop, driving uptime for your fleet. In addition, it lessens the need for oil changes, saving you time and money.

The Conserver uses a patented two-stage system that dramatically increases the life span of the equipment it is installed on. The evaporator head continuously evaporates emulsified WATER from the engine oil by heat and then passes a glass filtration canister removing PARTICLES down to 3 microns. The Conserver is adaptable to numerous industries, including:

On Highway

Vocational

Construction

Marine

Railroad

Industrial

THE CONSERVER

- Removes Emulsified, Dissolved and Free Water from Oil
- Reduces the Amount of Annual Oil Changes
- Dramatically increases equipment lifespan
- Sustainable Technology - Reduces total oil consumption of your business - ROI in less than a year
- No moving parts
- Drives Uptime by Extending the Maintenance Schedule for your Equipment
- Third-Party Validation from Global Laboratories
- Patented Technology
- Huge environmental Impact
